TEST COMMENTS:

This location was planted in very good soil conditions. After planting, the plot was dry for approximately 14 days; then it was dry starting in mid-August until early September. During the rest of the season, the location recorded over 15 inches of above-normal rainfall. The plot was in a very good location, and no ponding occurred. Emergence was good, and plants grew tall. Very little disease could be seen on the leaves, but there were some stalk issues, and lodging did affect some hybrids. Ears were long, slender, and pollinated well. The sturdy cobs made shelling easy.
