HARVESTED - STAND:	Sep 29 31.3 /A
PEST & DISEASE RISK:	Pythium*

TEST COMMENTS:

This location was planted in very nice conditions and received good rainfall from early April into May which helped emergence. The crops turned dry at pollination, and some tip back could be seen on a few hybrids. Plant health was good, with some tar spot visible more in the early hybrids. Plants were standing well at harvest with very little stalk lodging. Cobs were sturdy and girthy, which made shelling easy. This location was 4.4 inches above average for rainfall this year, and Ray was seeing some good yields for the start of this season.
