TEST COMMENTS:

This location was planted in wonderful soil conditions, followed by cold temps and a 3" rain event. Growing conditions stayed marginal until more heavy rains came through the area. This entire plot was standing great at the time of harvest and was very easy to pick. The plants were short-statured in most areas, and almost 100% of ears were dropped. The late growing season heat and little moisture in this area made for fast dry down. Even with yields being a bit low in this area, this location was very representative of what's going on in the region!
