TEST COMMENTS:

This conventional site was planted in near-perfect soil conditions and had excellent emergence. Uniform stands were seen here in Virginia. Tall, healthy plants with very little foliar disease were noted across this location, as well as zero weed pressure. Rainfall in this area (18" from planting until harvest) wasn't as significant as we have seen in other areas of this region, likely keeping the plot safe from heavy disease pressure but limiting yield. The only caveat to the conventional test was that there was a bit more lodging here compared to the traited test.
