TEST COMMENTS:

This location was planted in very nice soil conditions with excellent, even emergence across the site. The summer rains kept the crop going, with a decent amount of precipitation in June, little in July, and a pretty wet August. The late summer heat, along with not much cooling off at night, put some unwanted stress on this plot. The very fast dry down from the September and October heat made for easy shelling. Overall, this plot was a very good representation of this growing area for 2026.
