TEST COMMENTS:

This plot was planted in great soil conditions on a very uniform and fertile farm. Consistent emergence was noted here, but was stunted by the extremely wet weather during the early growth period. Wet weather continued most of the season, with a total of over 40" of rainfall YTD. There was minimal foliar disease despite all of the rainfall. Southern rust and GLS were visible, though there was very little tar spot. Some areas showed crown rot throughout this location, as noted in the lodging, primarily stalk lodging. Darren stated that the farms he has harvested thus far are roughly 20-30 bu/ac below average over the last few years. Overall, this was a nice location despite this season's challenges.
