TEST COMMENTS:

This was my first planted site for the year on a very uniform and fertile location. The site had a dry stretch following planting, with an unusually wet June and above-average rainfall through the rest of the growing season. There was some lodging at harvest, with lower yields compared to last year's record crop. The lack of dry growing conditions late in the season likely limited ear size (it was too wet). No fungicide or insecticide was applied to the site, as plant health looked good into late season.
