PEST & DISEASE RISK:	Fusarium, Pythium*

TEST COMMENTS:

This no-till location was planted in very firm, dry conditions late in April. Timely spring rains assisted in great emergence, and summer-long rainfall promoted great plant health and standability. Excessive rains throughout the season encouraged above-normal plant heights and top-end yields for some of the more aggressive hybrids. The crop moistures were very consistent. The extreme temperatures during the first three weeks of September dried all hybrids down rapidly. This is a great no-till location with great cooperators.
