TEST COMMENTS:

This uniform field site was weed-, disease-, and insect-free. A portion of the site was in a slightly lower area of the field, which became evident during three large rain events this field site experienced on 5/19 (2.40"), 6/21 (1.63"), and 6/26 (2.46"). These rain events accounted for 48% of the year's rainfall. This county was in a D2-level drought and had 2.98" less rain than the historical average. Center pivot irrigation was used to help mitigate crop stress. Overall, this was a good site.
