HARVESTED - STAND:	Oct 13 34.9 /A
PEST & DISEASE RISK:	Goss Wilt, Pythium, Maize White Spot*

TEST COMMENTS:

We planted this location on May 15 in dry conditions, followed by 2 inches of rain over the next few days. This led to strong emergence and uniform stand counts. Heavy rains and wind in late July and throughout September caused excessive moisture, weakened root structure, and led to significant lodging across most hybrids. Wet conditions throughout the season also slowed drydown at harvest. Cobs appeared higher than average, full, and with no tip back.
