HARVESTED - STAND:	Oct 24 33.1 /A
PEST & DISEASE RISK:	Pythium*

TEST COMMENTS:

This is a great location that always plants well following a wheat and cover crop rotation, which mellows the soil and provides green manure for added yield. Plenty of post-planting moisture helped in establishing good emergence and added early growth. Scattered lodging was seen within plots as stalk quality began to deteriorate later in the season. Some late-season kernel disease occurred due to an excess of late-season moisture.
