TEST COMMENTS:

This no-till conventional soybean plot was planted into a well-established and green rye cover crop, which was promptly terminated following planting. The terminated cover crop provided excellent weed control but may have resulted in a slightly lower final stand. Weed control was excellent through to the end of the season. The shriveled and off-color beans noted in many areas this year were completely absent from this plot. Many of the varieties tested here may qualify for additional premiums (food grade, high protein, etc); consult with the sponsoring seed companies for more information.
